SOM FORTELLER

Secure Data Capture from Digital Sources

CONFERENCE ON NEW TECHNIQUES AND TECHNOLOGIES FOR STATISTICS

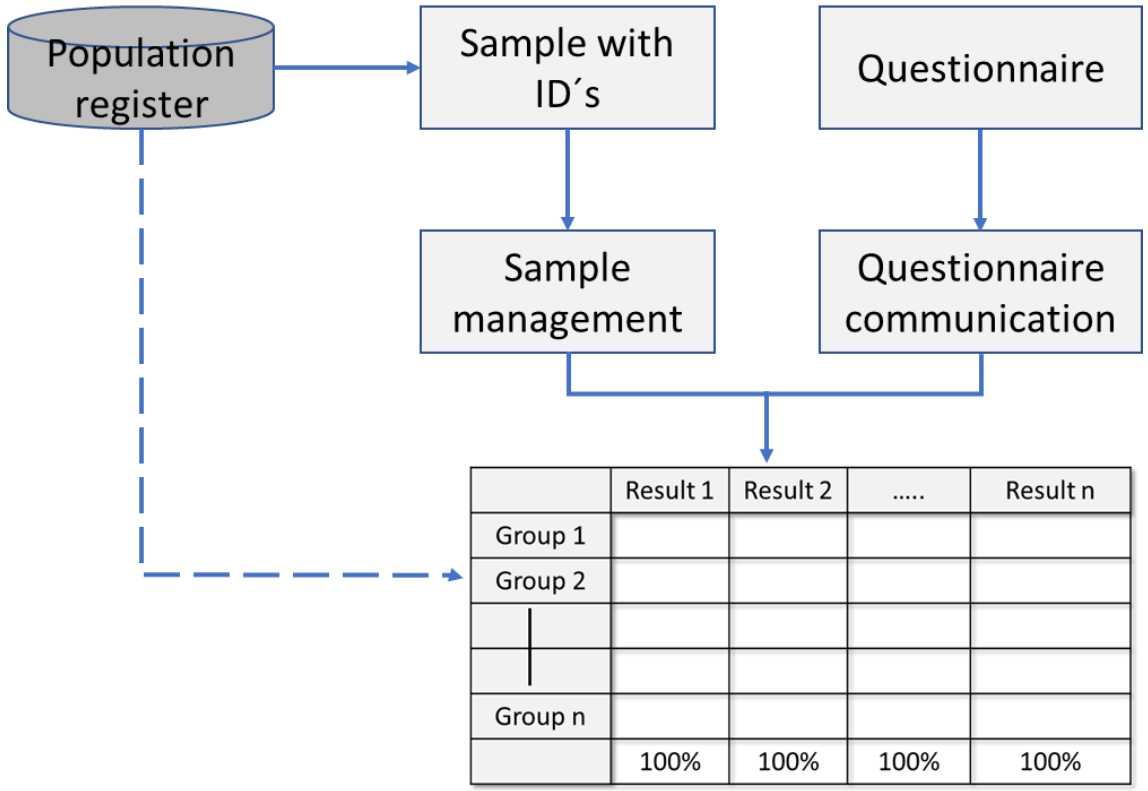
9 MARCH 2021 - 11 MARCH 2021

Li Chun Zhang, Gustav Haraldsen and Xeni Kristine Dimakos

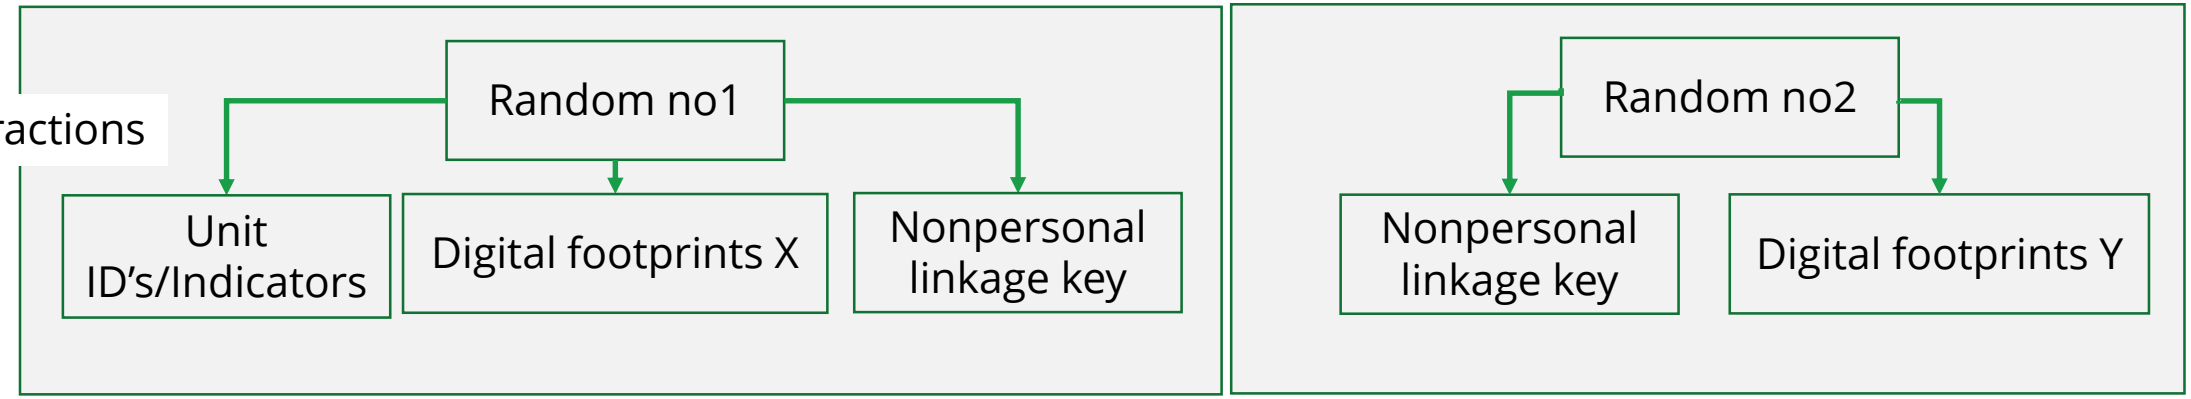
Statistisk sentralbyrå
Statistics Norway

Unit-based →Behaviour based Data Capture

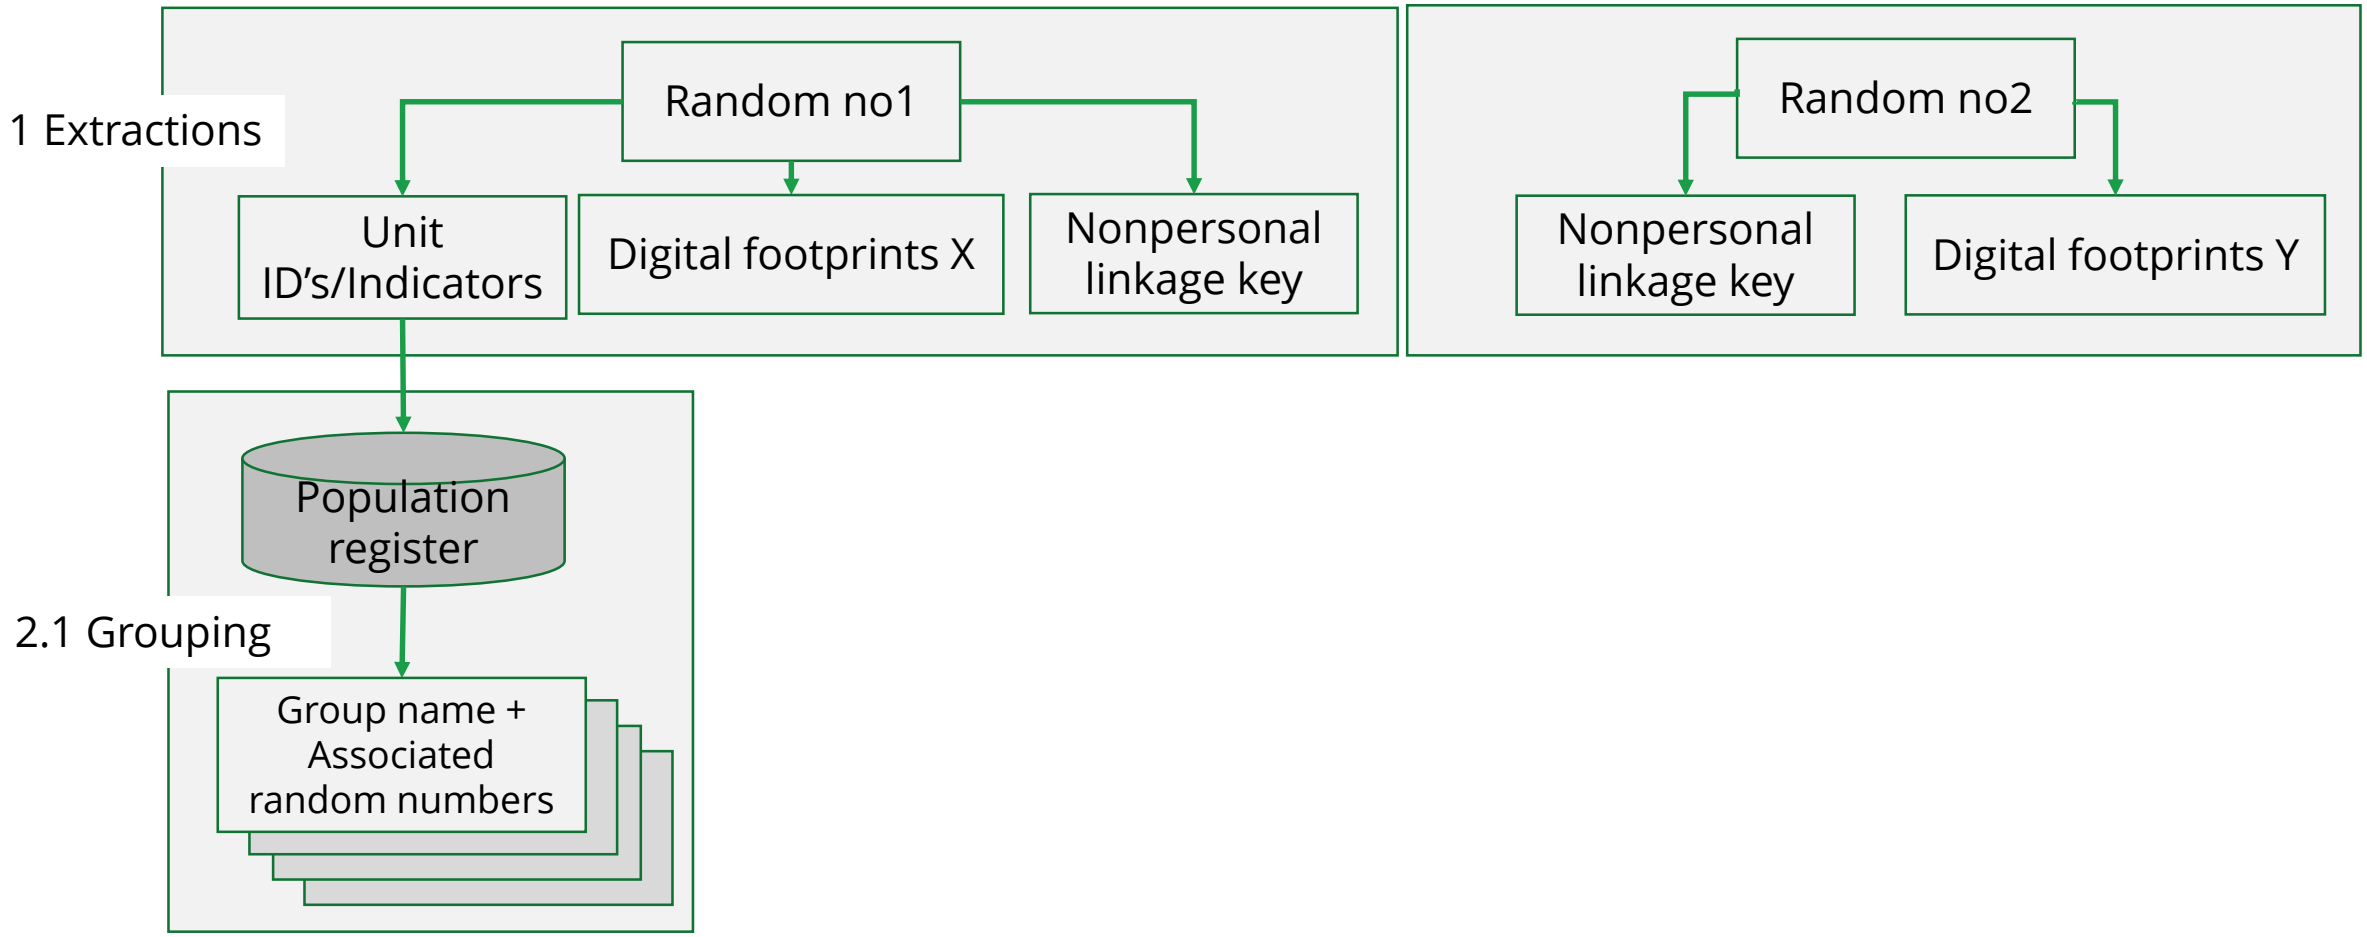
+ Direct sources of activities
  - Does not burden respondents
  - Gives more, and more precise results
- Identification concerns
  - Unit ID's are missing or protected
  - Informed consent unavailable
  - Confidentiality statements questioned



1 Extractions

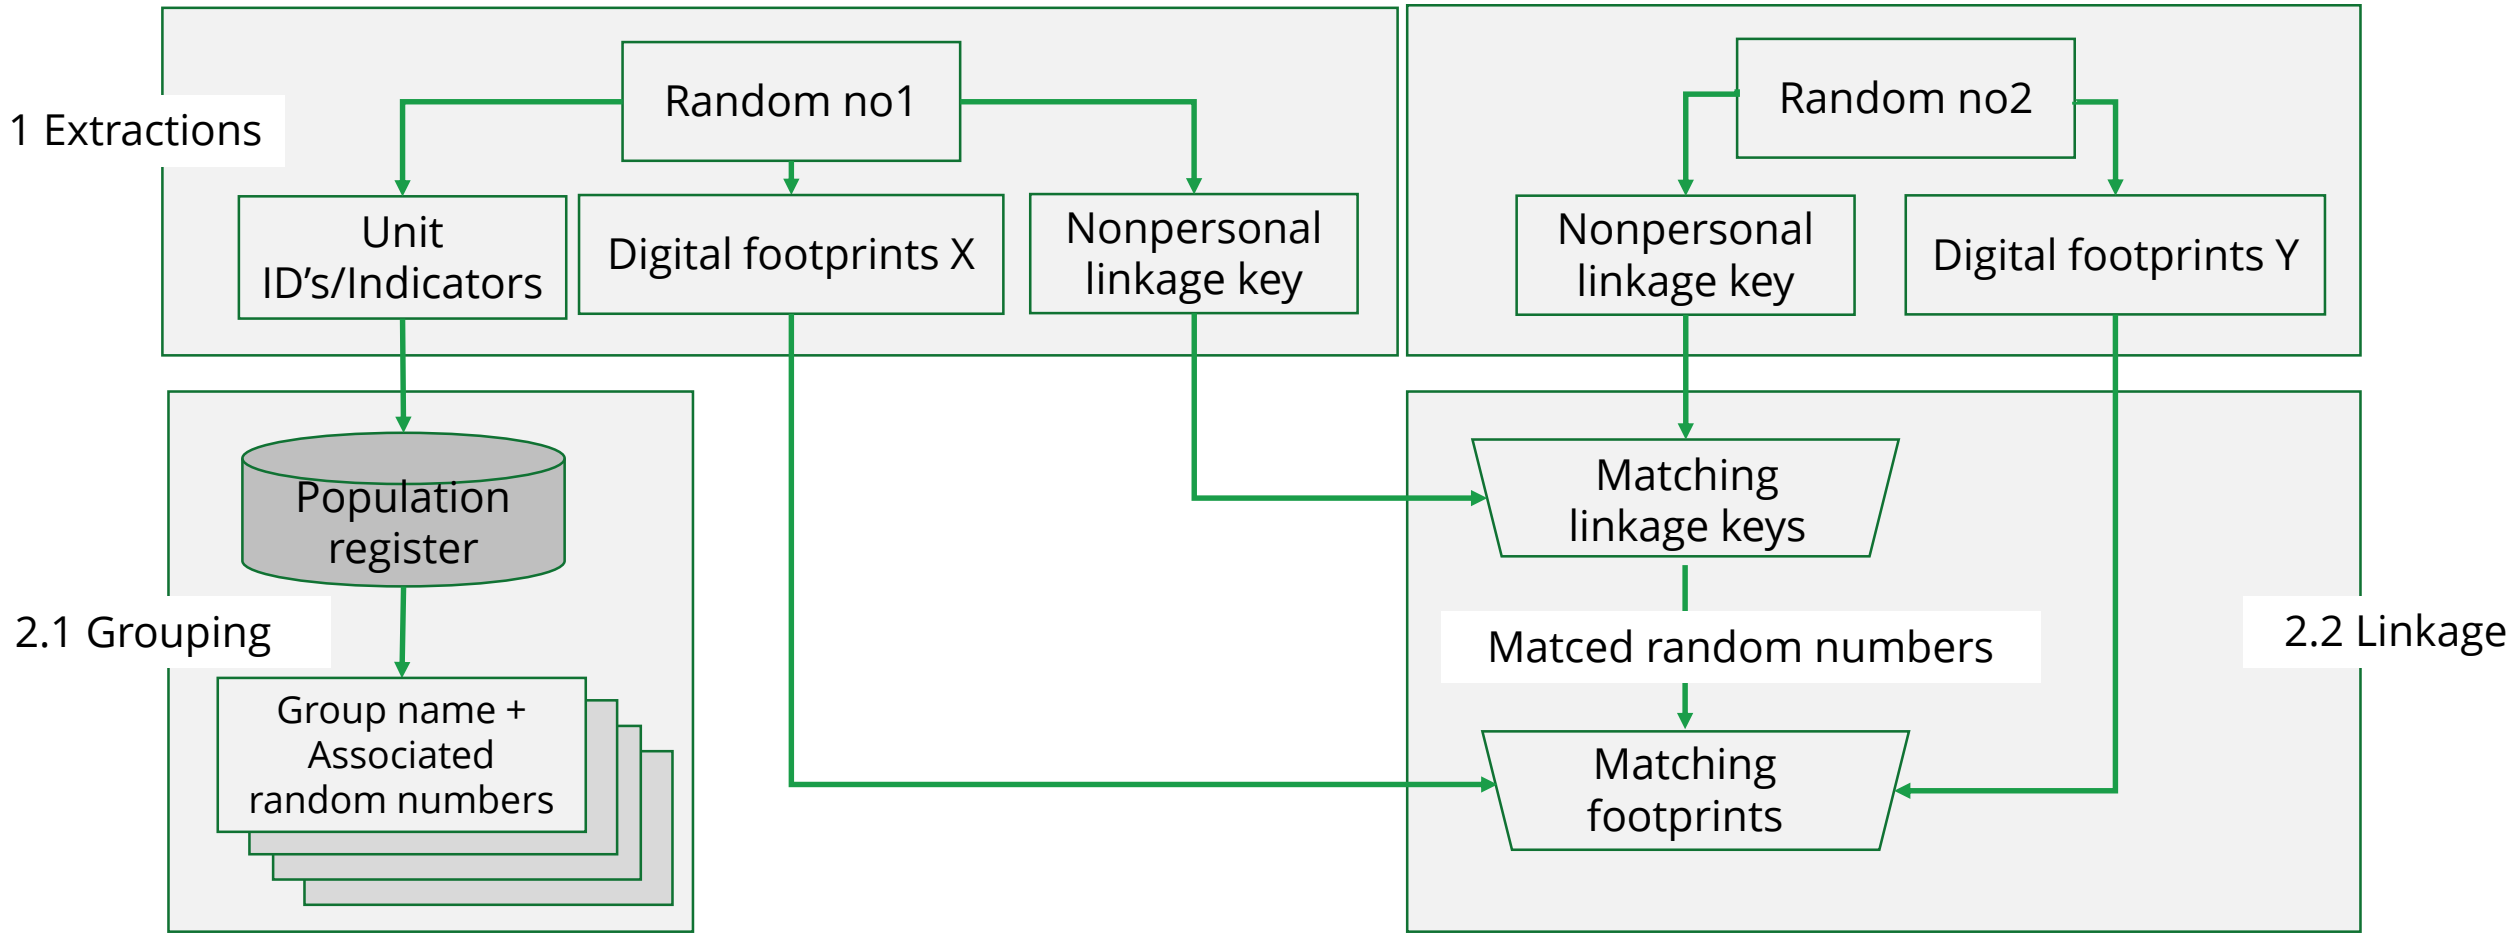


2.1 Grouping

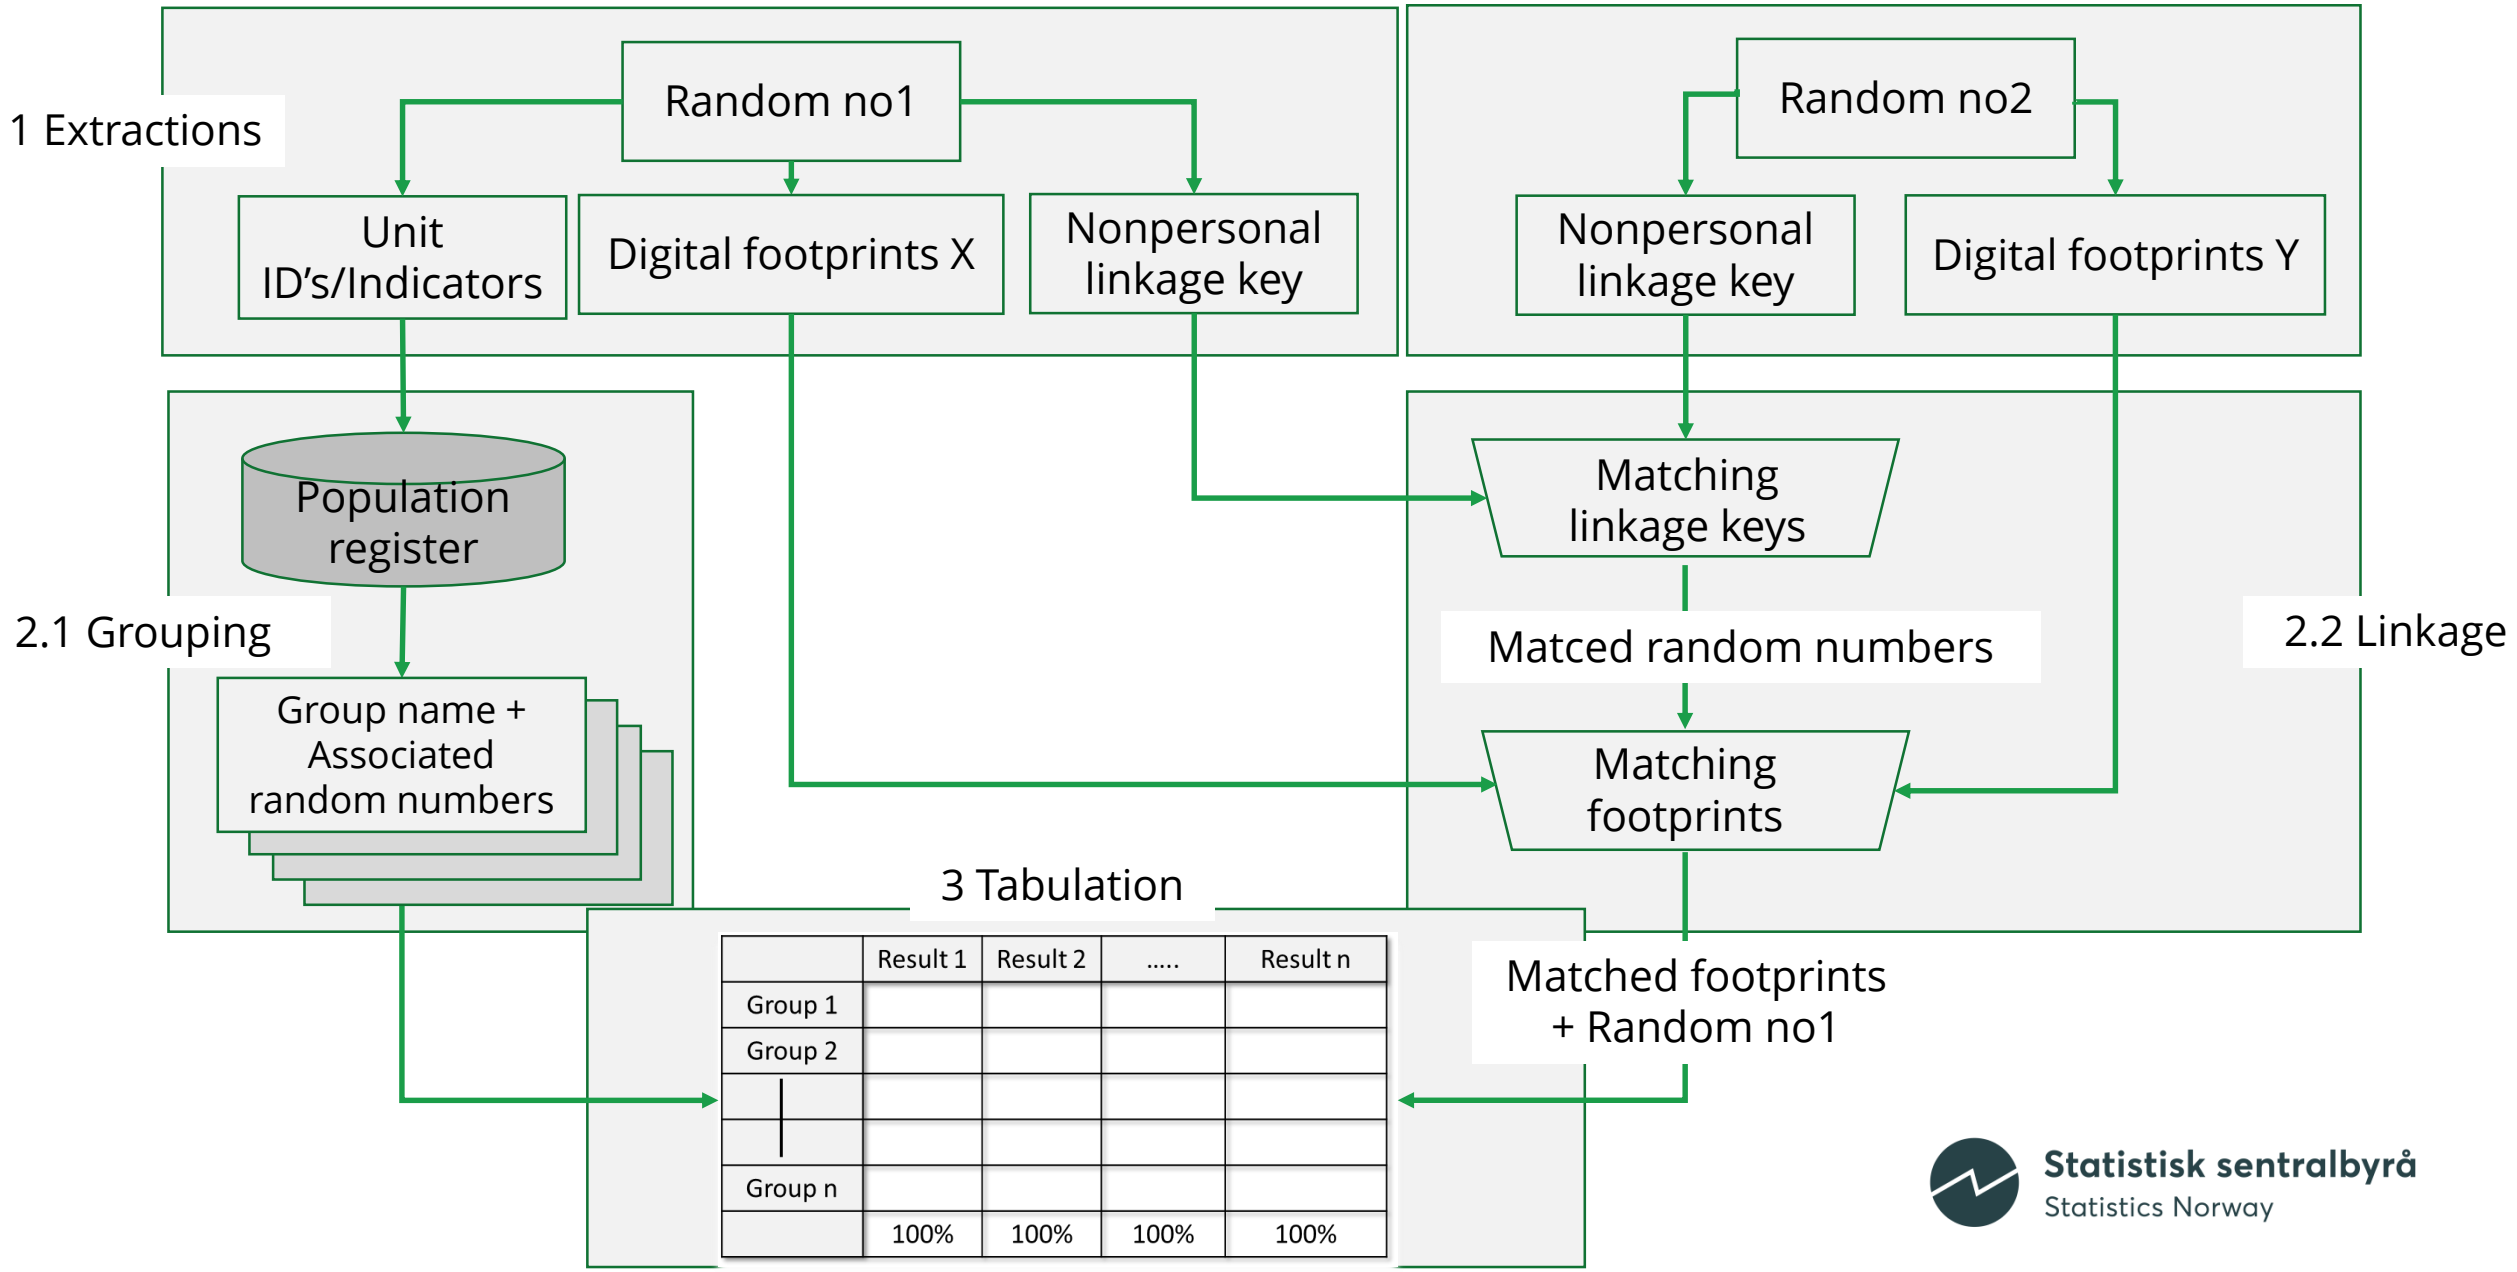


1 Extractions
Random no1
Unit ID's/Indicators
Digital footprints X
Nonpersonal linkage key
Random no2
Nonpersonal linkage key
Digital footprints Y
Population register
2.1 Grouping
Group name + Associated random numbers

2.1 Grouping 2.2 Linkage



3 Tabulation



Statistisk sentralbyrå

Wrapping up and pointing forward

- Tables that are not planned, will not be produced.
- While digital sources are direct sources to behavioural data, surveys are a more direct source to attitudes.
- When id-lists are missing, group allocation needs to be based on nonpersonal characteristics and behavioural patterns
- Statistical adjustment may be necessary, quality assessments certainly
- Trusted Execution Environments needs to be trusted by those involved
