

# Sustainability, consumption, resource productivity: regional material flow accounts

M. Carme Saborit, Jordi Galter, Cristina Rovira

**Material flow accounts (MFA)** provide an overview of natural resource extraction, trade in natural resources, waste disposal and emissions. MFA show the physical inputs of materials that enter the economic system and the outputs generated in terms of physical units. These accounts enable us to obtain a set of aggregate indicators on the use of natural resources, from which productivity indicators are derived.

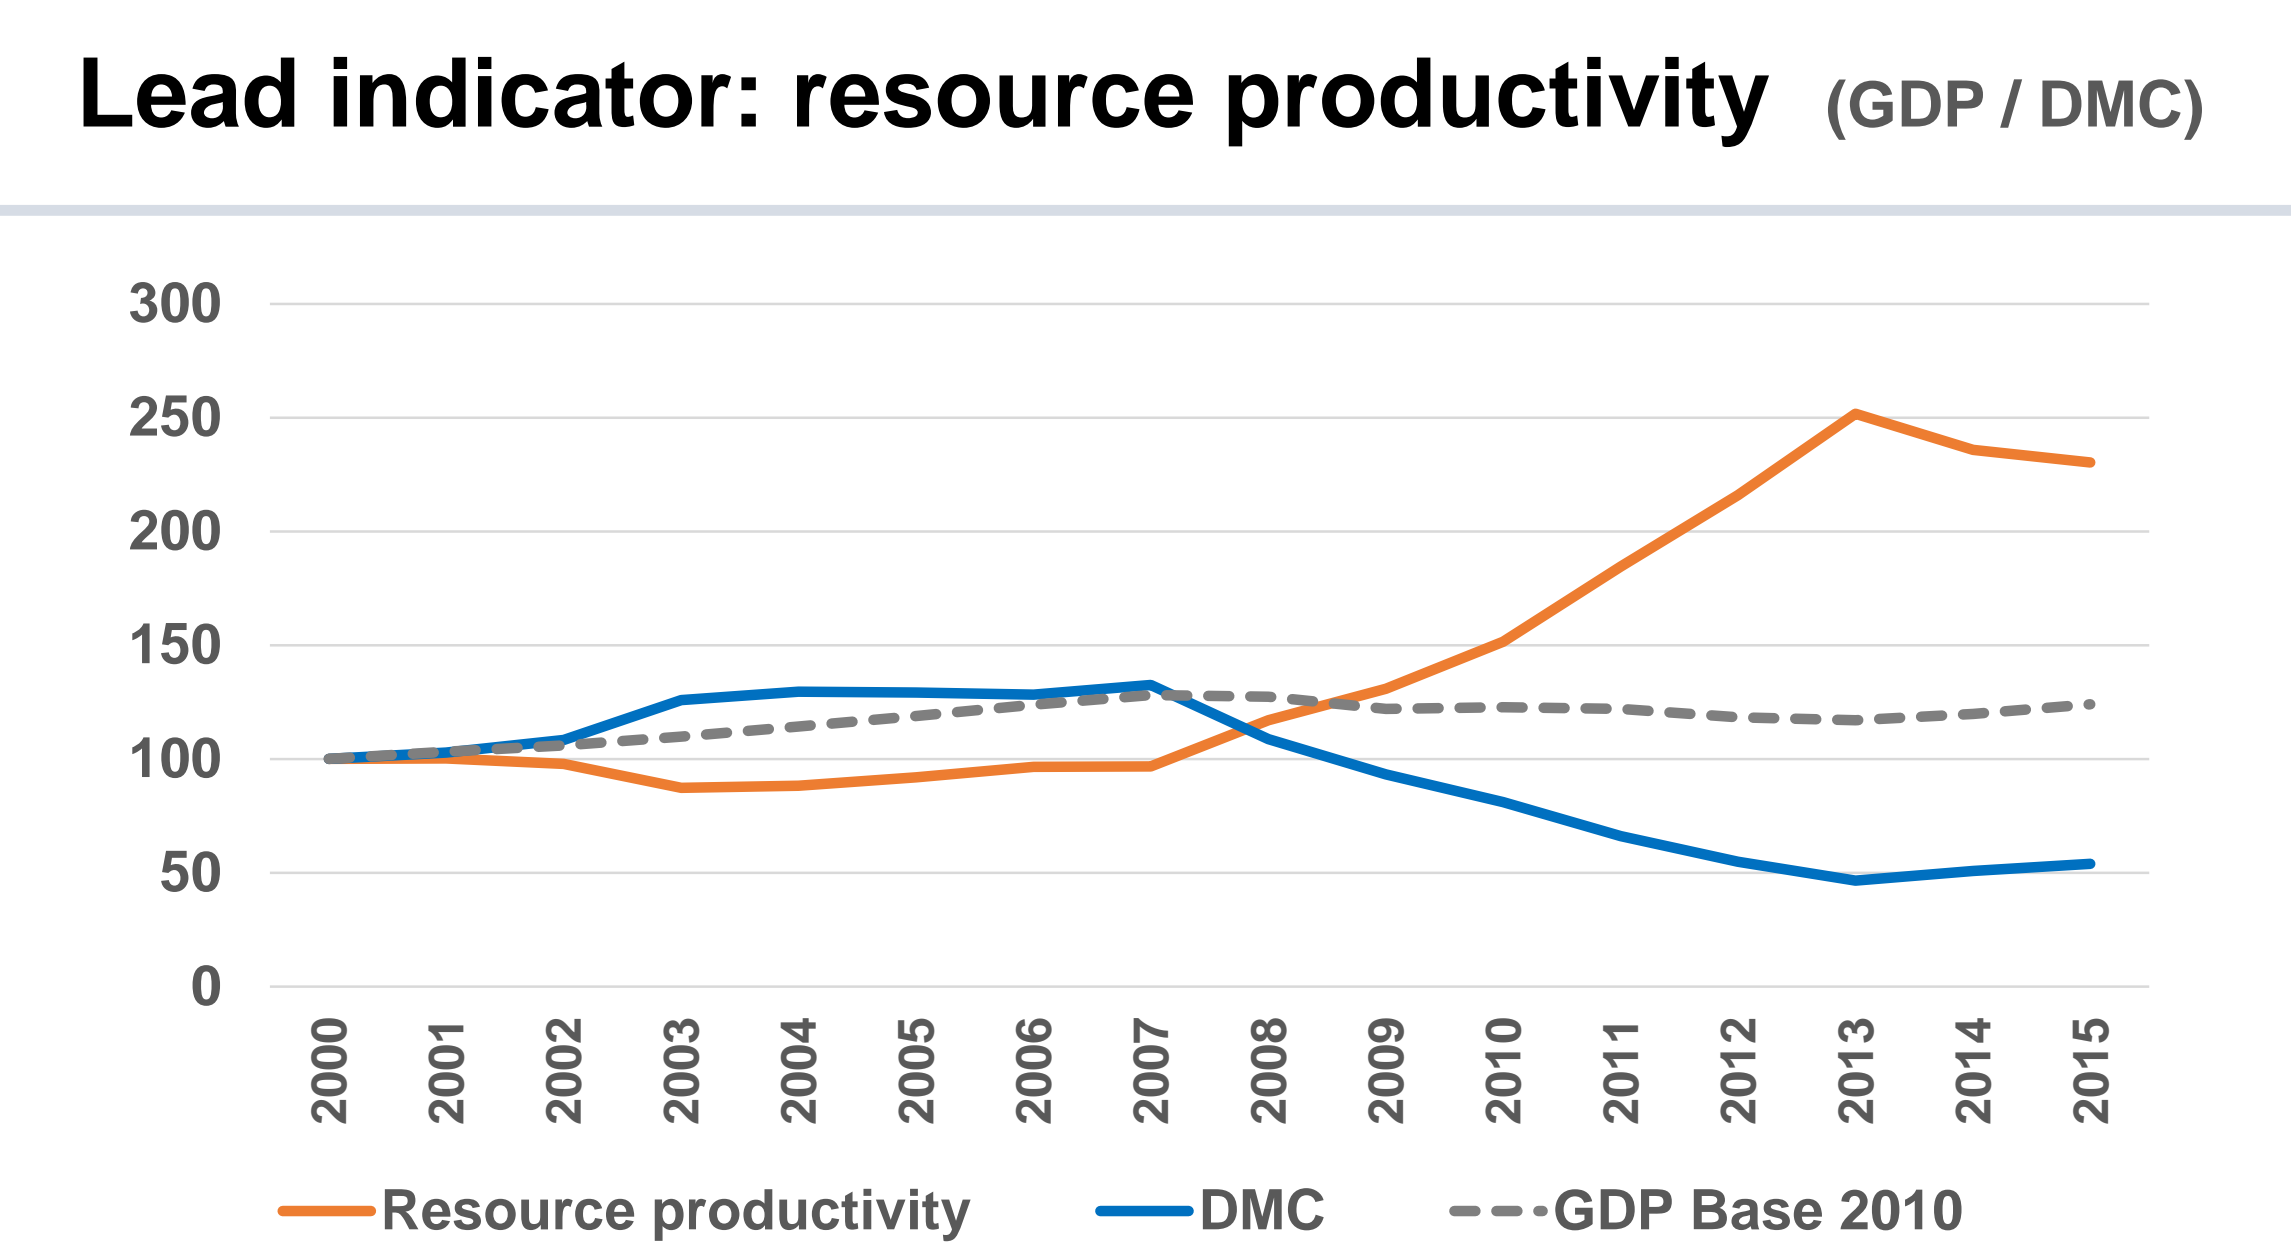

## Catalonia's Material Flow Accounts

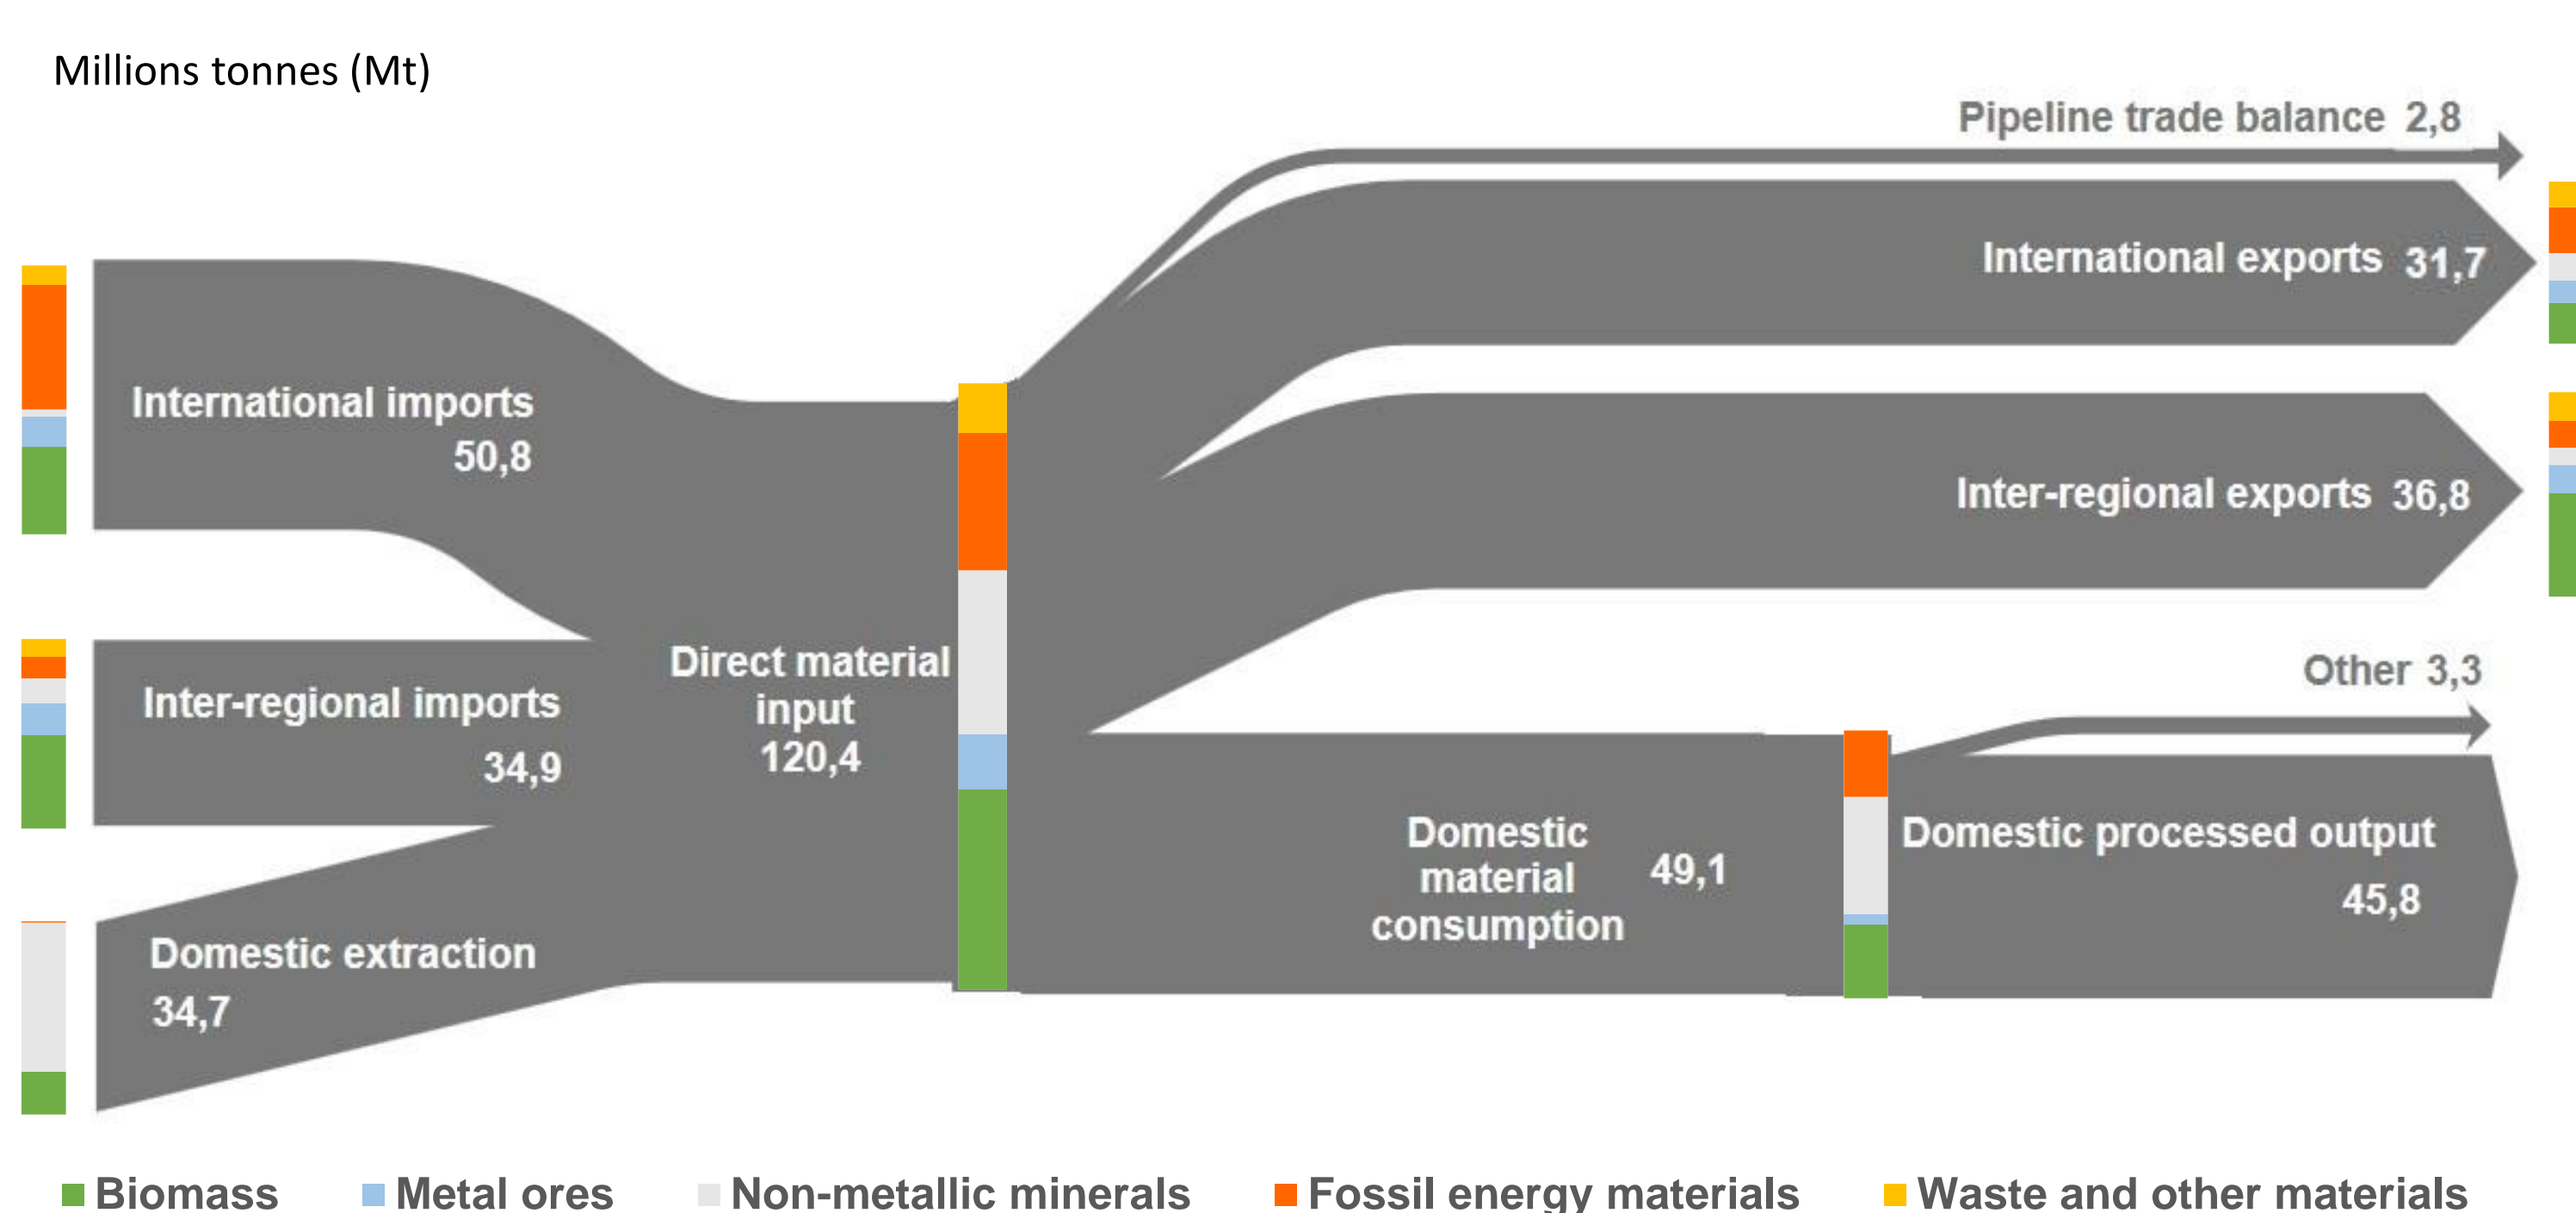

**Key indicators. 2015**

DMC	CO <sub>2</sub>		DMC	CO <sub>2</sub>	Resource productivity
(t per capita)			(Mt)		(€ / kg)
<b>6.6</b>	<b>5.7</b>	<b>Catalonia</b>	<b>49</b>	<b>42</b>	<b>4.9</b>
<b>8.8</b>	<b>6.6</b>	<b>Spain</b>	<b>407</b>	<b>304</b>	<b>3.0</b>
<b>13.5</b>	<b>8.1</b>	<b>UE28</b>	<b>6,859</b>	<b>4,122</b>	<b>2.2</b>

DMC = Domestic Material Consumption

### Flows of material resources. 2015

### Geographical origin of Catalonia raw materials. 2015

### Decoupling between economic activity and pressure on the environment

The diagonal line represents same average change rates of both GDP and DMC between 2000 and 2015.

- No decoupling:** Countries which had higher DMC growth than GDP growth.
- Relative decoupling:** Below diagonal line are all countries whose GDP increased faster than their DMC.
- Absolute decoupling:** Below the x-axis where countries which GDP grows and DMC falls.

### Domestic material consumption per capita
